

Versafire Color Charts

December 2024

Would you like to enhance your print projects with bold, eye-catching or elegant metallic effect colors?

To make it easier for you to find the right spot colors for your creative printing projects, we have reissued the familiar color cards with neon pink, neon yellow, gold and silver. You can download the cards here for reprinting on your Versafire.

Areas of usage:

Would your customers like to use special effect colours, but are not sure how the colours will look in print? The colour cards make the design easier, as a reference is available.

Why should you choose these colors for your print projects?

Neon Pink: Ideal for bold statements with a touch of creativity.

Neon Yellow: A strong eye-catcher, perfect for modern designs that demand attention.

Gold: Express luxury with this timeless metallic shade.

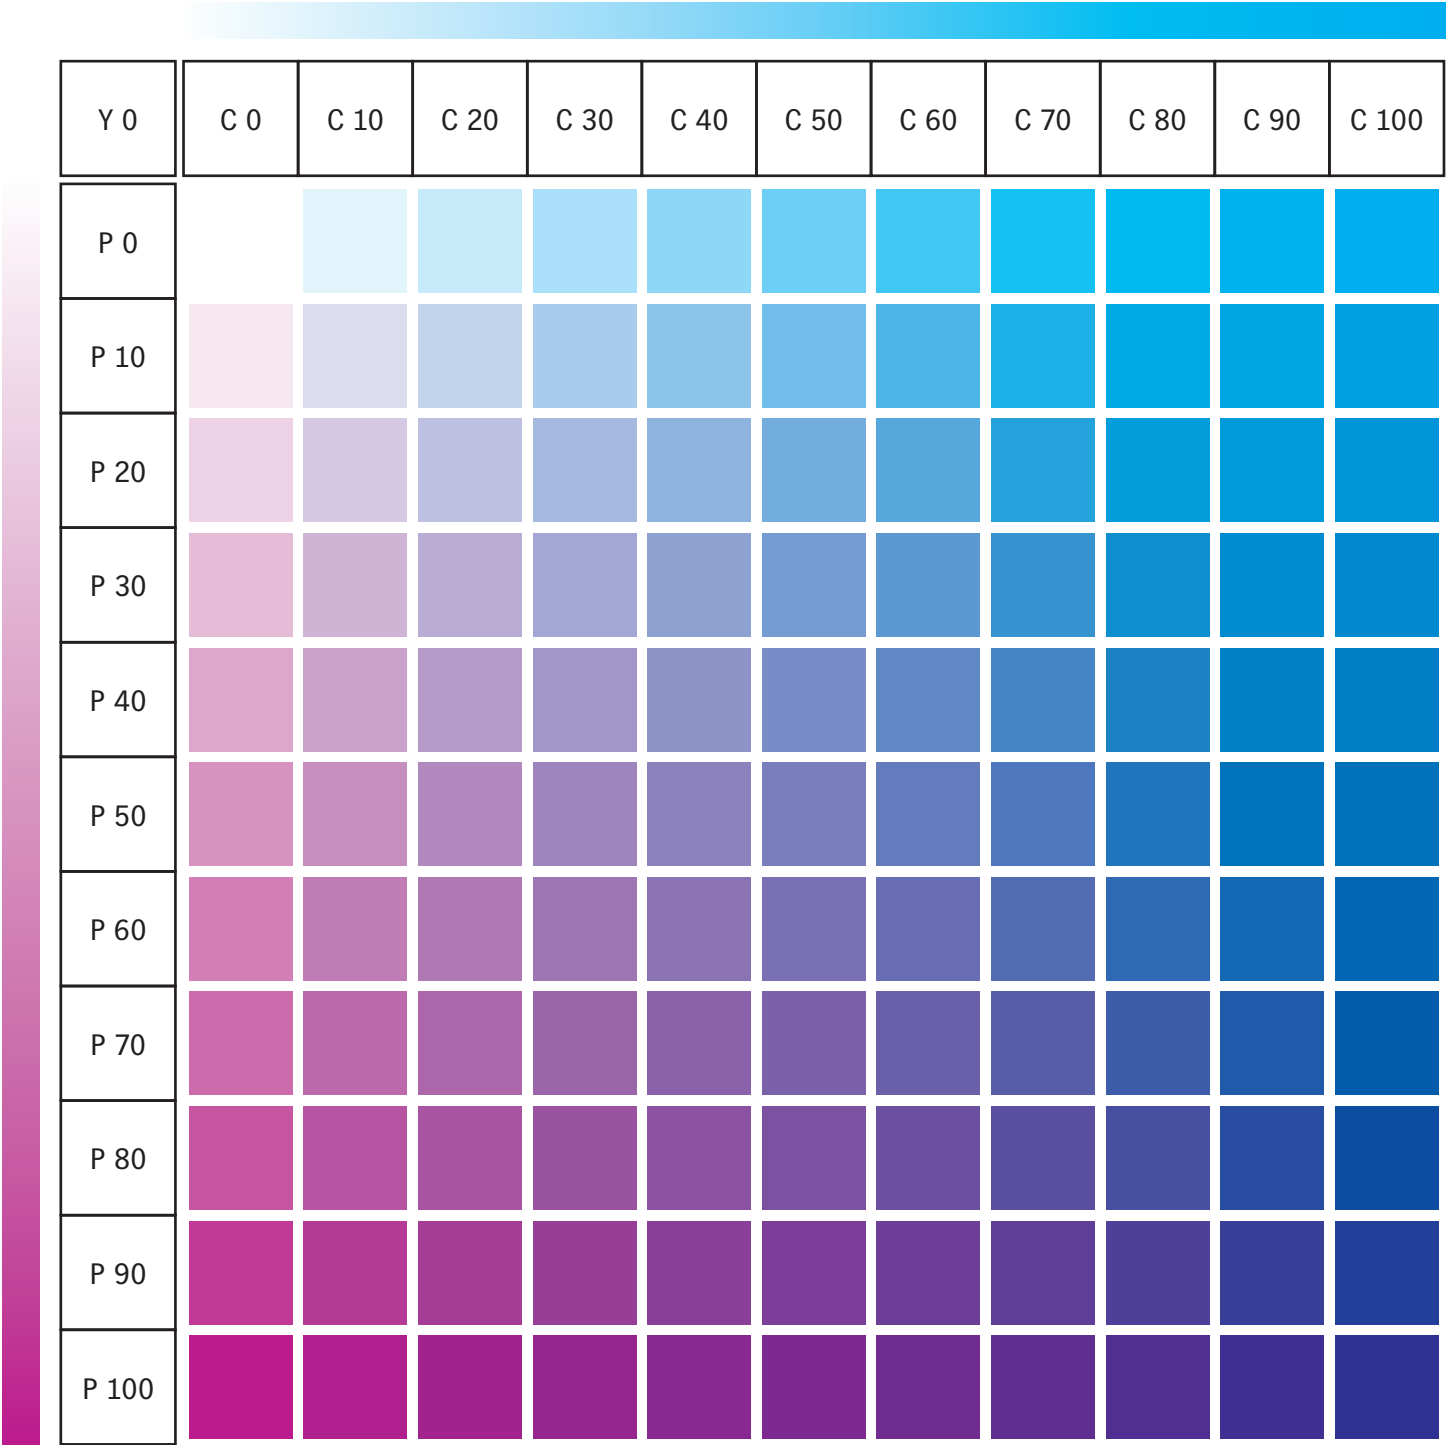

Silver: Elegant and contemporary, adds a sophisticated touch to any printed product.

Make your prints unforgettable with these must-have colors but **don't forget the limitations:**

- It is an effect not a color gamut expansion
- The repeatability is restricted
- The color fastness is lower than with CMYK, which means that the color fades faster.
